

# What is a Nonwoven?

Nonwoven: an array of fibers that are bonded to form a web, which is wound to form a roll

Types: Spunlace, Airlaid, Wetlaid, Needlepunch, Carded Thermal Bond, Spunbond, Meltblown....

fibers; synthetic natural manmade  
PE PET PP Bicomponent  
wood pulp cotton bamboo  
viscose lyocell PLA cellulose acetate  
spin finishes binders  
composite laminate elasticated  
sustainable single-use re-usable  
Basis weight tensile strength  
machine-direction cross-direction  
absorbent hydrophilic hydrophobic  
innovation process strategy  
mask tampon wipe diaper pad
