Crown Abbey Climate Commitment

Vision

Crown Abbey will promote responsibility for the environment throughout our organisational activities. We are committed to reducing our environmental impact and increasing our social impact.

Crown Abbey is committed to working with clients that promote and deliver products which support environmental, social and economic sustainability, wherever possible. We will work together as a team, in our day to day operations (and supply chain, where applicable) to ensure we deliver the most positive outcome for all.

We will be efficient, trustworthy, accountable and innovative in order to reduce our energy, water, waste and carbon.

Context

Recognising that climate change poses a threat to the economy, nature and society-at-large, Crown Abbey is committing to take action to:

1. Halve our greenhouse gas emissions by 2025 (using 2019 as baseline);
2. Reducing our greenhouse emissions at source, where possible;
3. Logging and calculating our annual Carbon Emissions on our in-house programme;
4. Off-setting any outstanding omissions which cannot be reduced further, annually, with a recognized provider; and
5. Disclosing our progress on a yearly basis.

In doing so, we are proud to join governments, businesses, cities, regions, and universities around the world that share the same mission.

We will review and measure (where possible) our current position with regard to our business activities on aspects such as resource use, waste, energy use, and climate change- it is of vital importance that we address these issues by being a part of the circular economy and take action to mitigate climate change.

As a small business, we will establish what we can control, what we can influence and aim to understand other areas that may be of concern. To create the greatest impact, following the circular economy principles we will reduce, re-use and recycle, across all actionable areas.

Imagination. Innovation. Implementation

Strategic Aims

To meet these commitments, we will:

- Provide appropriate resources to meet the aims outlined in this policy;
- Support all staff to meet these commitments;
- Endeavor to work across all areas of impact, from resource use, transport, office areas, and product use and disposal;
- Review our carbon footprint annually;
- Review but not enforce our waste, energy and water footprint;
- Achieve this through recording data, communication and relationship building with our supply chain;
- Develop a clear picture of our current status in order to set objectives with clear outcomes and identify actions to be taken;
- Take responsibility, measure, set targets, take action and report on progress made; and
- Off-set any greenhouse emissions that we cannot reduce to zero and where possible contribute in a 'net-positive' way to climate change gas emissions.

Target setting

- To set and review targets annually.
